

This documentation describes the following project: *N.V. Huisvuilcentrale at Alkmaar.*

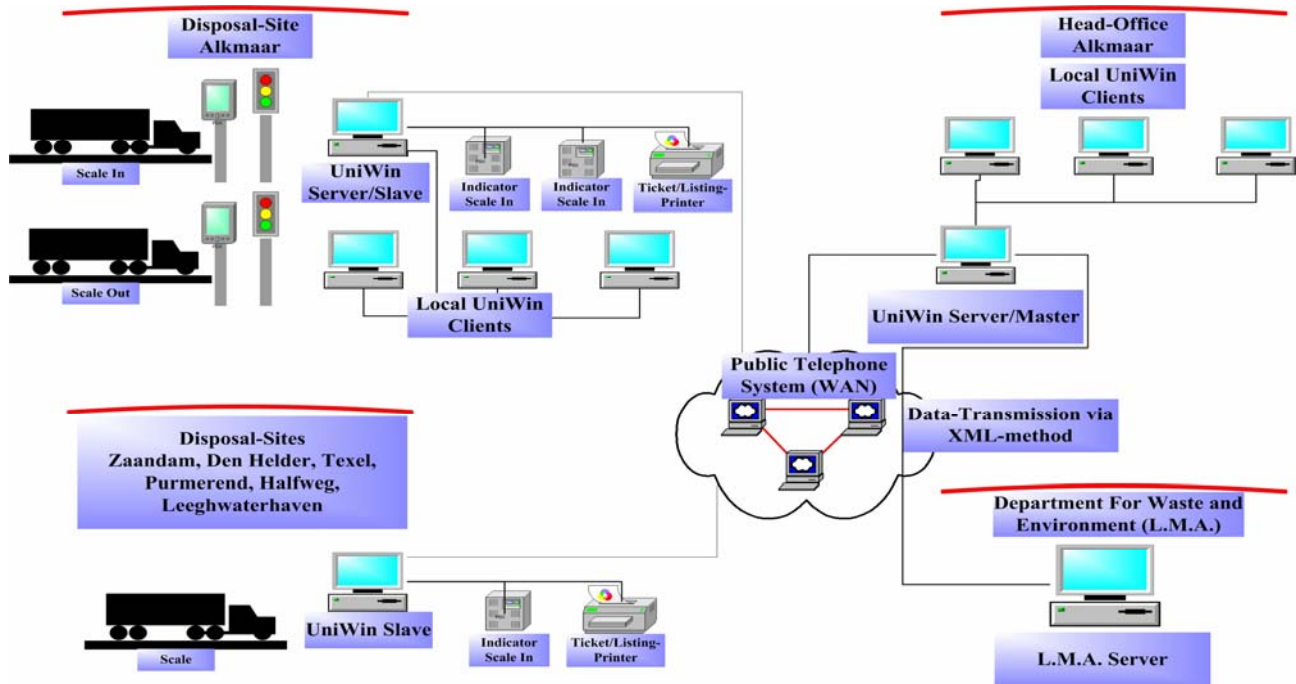

UniWin version 3.0 is used for to manage all logistic activities related to:

- Intake of waste.
- Correct registration and adminstration of all waste transactions.
- Synchronisation of the waste administration with the legal waste agency via XML-Messages.

At the backside of this document, you will find an extensive description of this project.

Description:

The image as shown above, provides a clear picture of all components involved.

- The "Huisvuilcentrale" owns a very advanced recycling installation in Alkmaar.
- Furthermore they exploit several disposal sites in the north of Holland.

The UniWin-application takes care of the following:

- At the disposal sites the garbage is collected and registered with UniWin.
- These UniWin applications at the disposal sites are managed by the UniWin at the head office. With the use of a WAN-network, base-files (customers, products) are managed via the head office. All weighings are collected in the UniWin at the head office.
- The UniWin application at the head office is equipped to synchronize the waste administration with the Legal Waste Agency. This is done for all disposal sites.
- With the use of an internet link XML-messages are send and received. In these the following activities are done:
 - * Collection of company No's
 - * First receive-notice
 - * Monthly receive-notice
 - * Monthly delivery-notice

Extra functionalities that are important for the "Huisvuilcentrale":

- Different reports and statistics.
- Export of weighings to the ERP-invoicingprogram.
